

Generator Power Blackout

Karel's has a generator that provides basic power to the house during blackouts. There is no backup power to the annexe.

The generator has just enough power to run the following:

1. Fridges
2. Water pump
3. Hot water units
4. The heating system
5. Limited lighting

During times of blackout guests should refrain from turning on all the lights or running appliances.

Procedure in blackout

You will need a torch if it is dark

1. Go to switch box located outside kitchen window and locate generator switch.
2. Switch from mains power to generator power.
3. Go to the back of the house and open generator housing.
4. Pull out generator
5. Ensure that power cable is connected to generator and to GPO on the wall and that they are both switched on
6. Turn the on/off switch on generator to on. It is on the opposite side to the rope pull.
7. Pull the top slide switch towards you to open the choke.
8. Push the lower slide switch away from you to open the fuel supply.
9. Pull the rope pull to start generator.
10. Once started push the upper slide switch away from you to close the choke.
11. To turn off generator put on/off switch to off position
12. Return to switch box and set generator switch to Mains position
