

## Regular Maintenance

### Weekly

1. Check water tanks and run bore pump if necessary

### Monthly

1. Switch to generator backup power and run generator for 30 minutes.

Check that fridges, water pump, hot water units, heating and lighting are running.

Ensure that generator fuel tank and spare fuel tank are full.

2. Remove filters from range hood and clean in dishwasher – **do not use any powder.**

The filters will be damaged if powder is used.

3. Check around septic tanks for any strong smells, overflow or clumps of dark green grass.

Arrange pump out if any of the above are present.

4. Inspect gas tanks for any gas smells. Report any issues to Elgas.

**Do not use any naked flames near gas tanks.**
